

Salem Radiology Operational Design Focuses on Specialty Diagnosis

“PROVIDING A WINDOW INTO THE HUMAN BODY...
THROUGH OUR ADVANCED IMAGING CENTERS”

The concept is simple. Develop staff with special areas of expertise and let them focus on their strengths. This is the design concept Salem Radiology Consultants operates under and is experiencing tremendous results in satisfaction from our patients and the medical community.

While it may sound simple, implementing this design in the daily operations of a radiology department can be complex because it requires a large staff of physician radiologists with the right skill mix to implement effectively. Nationally there is a shortage of radiologists and even fewer radiologists with the specialized skills necessary to operate under this model of care. Salem Radiology Consultants has been successful in attracting the nation's best.

According to Administrative Director, R.A. Neitzel, “people are often surprised to learn that our medical staff consists of graduates from Stanford, Harvard and Yale, as well as many other prestigious Universities.” The vast majority of our radiologists have spent an additional one to two years of post residency training, acquiring the skills to implement this plan. Currently, Salem Radiology Consultants has the region's largest staff of physician radiologists at 16 with plans to hire additional specialists. These specialists provide clinical oversight and responsibility for dedicated “Centers of Excellence.”

According to Neitzel, “Advancements in computer technology allow us to take more images in a shorter amount of time and with greater clarity for better diagnosis. As an industry we can now see detail that we couldn't begin to see in the past. The ability to see micro structures within organs, tissue, bones and joints is best served by having a physician radiologist with highly specialized expertise and knowledge. Recognizing this, SRC has developed a highly specialized practice which is generally only available at large university medical centers and very unique in a private practice operation.

SPECIALTY FOCUS

Women's Imaging Center at SRC

The woman's Imaging Center is the region's largest provider of Advanced Women's Imaging

- Mammography with computer aided detection
- Breast MRI
- Minimally invasive breast biopsies
- Obstetric and gynecological ultrasound
- CT & Bone Density Testing

Clinical Directors for Women's Imaging:

Dr. Kathy Scanlan, Dr. Gary Jones, Dr. Richard Collins

Neuro Imaging Center at SRC

Advanced MRI Imaging of the head, brain & spine

Advanced MRA imaging of the head, brain & spine

Advanced CT imaging of the head brain & spine

Clinical Directors for Neuro Imaging:

Dr. David Farthing and Dr. Diego Covarrubias

Orthopedic Imaging Center at SRC

State of the art imaging for conditions involving bones and joints

- Advanced orthopedic MRI, CT and ultrasound
- Clinical Directors for Orthopedic Imaging:
Dr. Leon Burrows, Dr. Michael George and Dr. David Morrell*

Body Imaging Center at SRC

State of the art MRI, CT and ultrasound Imaging for conditions involving chest, abdomen and pelvis.
