

“PROVIDING A WINDOW INTO
THE HUMAN BODY . . . THROUGH
OUR ADVANCED IMAGING CENTERS”

**CT-64
@ SRC**

Diagnosing Heart Disease in 10 Seconds

A **CARDIAC CT** is a quick and painless CT scan of the heart and chest. With state of the art CT-64 technology at Salem Radiology Consultants, pictures of the heart can be taken with such precision and quality that a person's heart health can be revealed in 5 heartbeats, or less than 10 seconds of scan time.

With this study, your patient will be placed into one of three outcome categories:

- A. LOW RISK** – Normal with minimal to no narrowing of the coronary arteries.
- B. INTERMEDIATE RISK** – Moderate narrowing of the coronary arteries which requires active management with diet, exercise and prescription medications known as statins.
- C. HIGH RISK** – Severe narrowing of the coronary arteries with the recommendation for immediate referral to a cardiologist for surgical intervention.
